Software and Electrical Controls Engineer with 10+ years leading robotics and automation initiatives, integrating vision and cloud technologies, and delivering production-scale logistics platforms.

Specializing in cross-system integration, real-time automation, and scalable deployment of edge robotics solutions.

Work Experience

Bastian Solutions: Robotics — Software Engineer II

April 2025 – Present

Bastian Solutions: Robotics — Software Engineer I

September 2022 – April 2025

- Led cross-functional integration of robots, vision systems, and PLCs, enabling real-time automated logistics workflows.
- Architected containerized deployments and CI/CD pipelines, reducing deployment time by 40% and improving release reliability.
- Owned delivery of automation platforms from prototype through production deployment across multiple customer sites.
- Partnered with customers and field teams to deploy and refine custom automation systems in production environments.
- Guided engineers and technicians during deployment and troubleshooting of integrated robotics systems.

Key Platforms

- **Pick and Drop Automation Platform:** Enabled automated pallet handling through vision detection and motion serialization integrating IFM vision and FANUC robots.
- **Smart Pick Vision Pipeline:** Delivered bin picking solution integrating vision and LLM-assisted workflows; built Azure annotation tools and Angular UI for dataset lifecycle management.
- **Image Picker Integration Platform:** Enabled warehouse order systems to interface with robots via OCR and HID automation.
- **Stack Order Platform:** Modernized palletization generator to .NET Core and React, enabling scalable multi-client deployment.

Beckwood Press — Electrical Controls Engineer II

October 2021 – September 2022

Beckwood Press — Electrical Controls Engineer I

October 2016 – October 2021

- Led electrical system design including PLC programming, UL 508A-certified panels, and customer acceptance testing.
- Standardized machine parameterization and control programs, reducing configuration errors and improving deployment consistency.
- Guided performance analysis of new product lines, informing enhancements and market readiness.

Key Systems

- **Hydraulic Control System:** Enabled precise cylinder position and force control using feed-forward algorithms and Kalman filtering.
- **Servo Press Platform:** Delivered high-precision all-electric press using Yaskawa and Allen-Bradley servo systems.
- **Auxiliary Automation Systems:** Designed integrated infeed/outfeed, containment, and conveyance solutions.

EPIC Inc. — Electrical Controls Technician

December 2014 – October 2016

- Assembled electrical panels and industrial systems for pilot plants, vision systems, and custom equipment.
- Implemented designs meeting NEC, sanitary/wash-down, and Class I Division I standards.
- Supported engineering teams during startup and acceptance testing to ensure operational readiness.

Skills

Technical Expertise

- Languages: Python, C#, C++, TypeScript, T-SQL, Structured Text (IEC 61131-3)
- Backend: FastAPI, SQLAlchemy, ASP.NET Core, Entity Framework, gRPC
- Frontend: Angular, Tailwind CSS, React, HTML5, CSS3
- DevOps / Cloud: Azure, Docker, CI/CD, Automation Deployment, Vercel, Neon, Render
- Automation Platforms: Studio 5000, TwinCAT, TIA Portal, Ignition, Indusoft

Leadership & Delivery

- System Architecture Cross-Functional Integration Productization
- Deployment Ownership Standardization Operational Reliability

Education

Ranken Technical College — Associate Degree in Electrical Control Systems

December 2014

Volunteer

Football Coach (Offensive/Defensive Line) — Titans of Troy, IL
